

Cost of a Background Check

The overall cost of a background check in large depends on the quantity of information requested. In case your background check requires a variety of reports, costs can increase drastically.

The cost of background verification depends primarily on:

- Types and Number of checks
- Vendor selected and Access Fees

It's also important to bear in mind the effort and time required to validate information not available on public records, such as education degrees or reference checks. This information ought to be independently checked, which can add to the total time and cost of a background check.

“EXAMPLES INCLUDE”

DEPENDING UPON YOUR SPECIFIC REQUIREMENTS, YOU MAY CHOOSE MORE THAN ONE ASSESSMENT OF EACH TYPE, AND ON AVERAGE EACH BACKGROUND REPORT COSTS \$15-\$30

We believe that a valid credential should not depend on the issuer institution for its validation. Anyone should be able to verify it without contacting the issuer. That means that even if the issuer no longer exists or their records are lost, it would not influence the verification of an existing credential. This “no central point of failure” aspect is one of the primary reasons that blockchain technology was leveraged by our platform. Learn more about Block.co today!
