

How our Solution Works

1. ISSUANCE OF DOCUMENTS

A document (typically a PDF file) needs to be provably tamper-proof

When organizations issue documents

A digital fingerprint of the document is anchored to the blockchain

A blockchain proof is then added back to the document

The final verifiable documents are then disseminated to the owners

2. VALIDATION OF DOCUMENTS

Go to an online validator found on issuer's and other websites

Upload the document to begin verification of the blockchain proof

Get an immediate response as to its validity

3. REVOCATION OR EXPIRY OF DOCUMENTS

Document can be revoked or expired without erasing audit trail

The ONLY truly decentralized solution to secure PDF documents from fraud without intermediaries!

Block.co transforms the way organizations leverage open-source vPDF technology in the issuance, revocation, and validation of self-contained and self-verifiable documents.
